

**IN THE CLAIMS:**

Please cancel claim 5 without prejudice, add new claims 10-13 and amend the claims as follows:

1. (Currently Amended) An apparatus for orientating a work tool, the apparatus comprising ~~an~~ a first anchor, an energy unit, a programmable controller, an axial displacement part, ~~and a rotational part[[,]]~~ and a second anchor, wherein the axial displacement part is located between the first anchor and the second anchor and at least one of the axial displacement part and the rotational part ~~being~~ is controllable by the programmable controller so that the work tool can be steered along any path within a work area.
2. (Original) An apparatus as claimed in claim 1, wherein the axial displacement part comprises a telescopic member.
3. (Original) An apparatus as claimed in claim 2, wherein the relative position of the telescopic member is transmittable to the controller by means of a position transmitter.
4. (Original) An apparatus as claimed in claim 1, wherein the relative position of the rotational part is transmittable to the controller by means of an angle transmitter.
5. (Cancelled)

6. (Currently Amended) An apparatus as claimed in claim 1, ~~further comprising a~~ wherein the work tool is operably coupled to the axial displacement part or rotational part.

7. (Original) An apparatus as claimed in claim 6, wherein the work tool is a cutting tool.

8. (Original) An apparatus as claimed in claim 7, wherein the cutting tool is a high pressure water cutter.

9. (Currently Amended) A method of orientating a work tool in a wellbore, comprising:

~~setting an anchor in the wellbore; and~~

directing the work tool with an axial displacement part and a rotational part operably connected to ~~the~~ at least one of a first and second anchor, wherein the axial displacement part is positioned between the first anchor and the second anchor; and

wherein at least one of the axial displacement part and rotational part ~~are~~ is controlled by a programmable controller.

10. (New) An apparatus as claimed in claim 1, wherein the axial displacement part comprises a piston rod.

11. (New) An apparatus as claimed in claim 1, wherein the rotational part is coupled to the second anchor.

12. (New) An apparatus as claimed in claim 2, wherein the rotational part is coupled to the telescopic member.

13. (New) The method as claimed in claim 9, further comprising:
- releasing the first anchor;
  - moving the first anchor to a new position in the wellbore;
  - setting the first anchor at the new position in the wellbore; and
  - releasing the second anchor.
